PeakForm — UI Design Spec

Doc 03 of 08 · Version 1.0 · Layout, UX behavior, and the map from each design frame to code. All tokens come from Doc 02; all copy from Doc 04.

1. UX principles (apply to every section)

1. **One primary action.** "Book a free intro call" is the only primary goal. Every primary button on the page scrolls to `#contact`. Secondary actions ("See the programs") scroll to their section
2. **Mobile first.** Design at 390px, then expand. At least 70% of a Fiverr buyer's first look is on a phone
3. **First screen answers three questions** without scrolling: who is this for, what do I get, what do I do next
4. **Scannable in 10 seconds.** A visitor reading only headlines, labels and buttons should understand the offer
5. **Real states.** Every interactive element has hover, focus-visible, active and disabled states. The form has idle, validating, loading, error and success states
6. **Specific over generic.** Real numbers, real program names, real prices, a real coach voice
7. **Accessible by default.** Skip link, one `h1`, ordered headings, visible focus, 44px minimum tap targets, labels on all fields, text contrast per Doc 02, reduced-motion support
8. **Fast.** Static page, three photos, three fonts, almost no client-side JavaScript. Only the mobile menu and the form are client components
9. **Honest.** A visible "Sample content" note in Results and the footer

2. Page rhythm (surface order)

#	Section	Surface	Why
1	Navbar	light	Always visible, quiet
2	Hero	light	Big type on warm bone is the brand's signature

#	Section	Surface	Why
3	Stats strip	**ink**	First color flip signals a new section without a divider graphic
4	Programs	light	Dense, list-based, easy to scan
5	About (+ photo band)	light	Human moment; the photo band is the visual pause
6	Client results	**ink**	Numbers read best as bright mono on dark
7	Pricing	light	Needs clarity and breathing room
8	Testimonials	**ink**	Quotes get weight against dark
9	FAQ	light	Utility section
10	Final CTA	**ink** with an 8px accent bar on top	The one loud moment, made with a color bar, not a gradient
11	Contact form	light	Fields are most legible on bone/paper
12	Footer	**ink**	Closes the page

3. Section specs

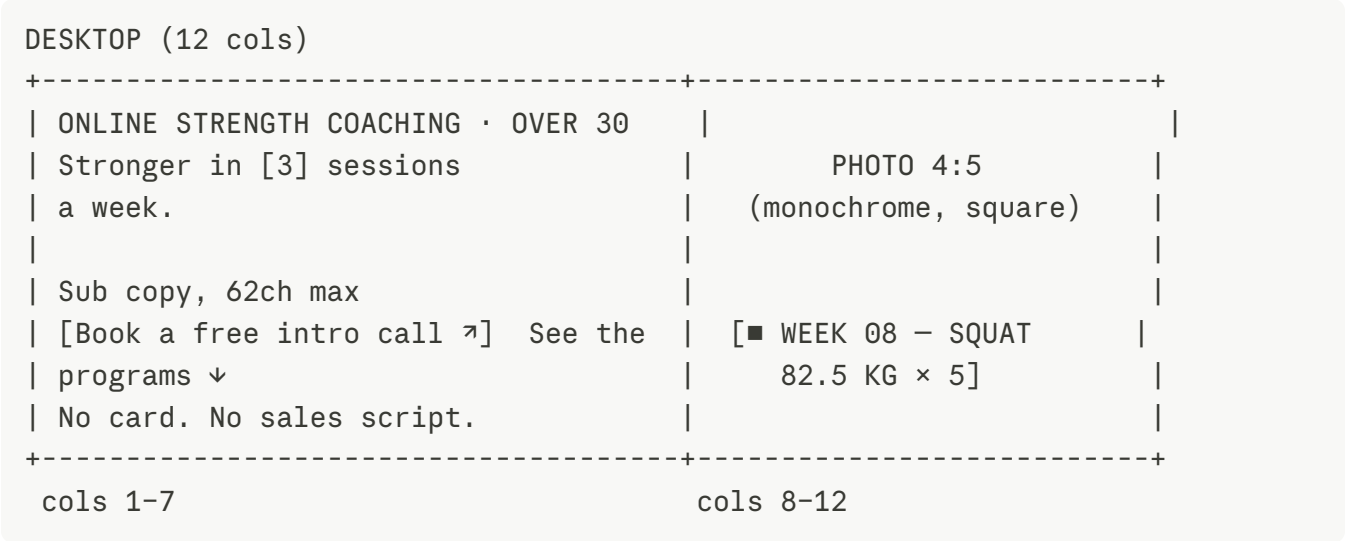

Each spec lists **desktop (1280)**, **mobile (390)**, behavior, and the **content source** (config key from Doc 05). Section numbers in labels (`01 — PROGRAMS`) are generated from the section order, not typed into the copy.

3.1 Navbar (`Navbar` · `nav`)

- **Desktop:** 72px tall. Left: logo mark (24px orange peak shape) + "PeakForm" wordmark in Archivo 800. Right: five text links (Programs, Coach, Results, Pricing, FAQ) in Instrument Sans 500, 15px, then a primary button "Book intro call" (height 44px in the nav)
- **Mobile:** Logo left; a "Menu" button right (text + `Menu` icon, 44px). Opens a full-screen `bone` panel with five `display-md` links stacked, each separated by a hairline, and the primary CTA pinned at the bottom

- **Behavior:** Sticky. Bottom hairline appears after scrolling 8px. Active link gets a 2px underline (scroll-spy is optional; skip if it adds JavaScript beyond the menu). The menu traps focus, closes on `Esc`, link click and outside click, and locks body scroll. Focus returns to the Menu button on close
- **Also:** A "Skip to main content" link is the first focusable element and becomes visible on focus

3.2 Hero (`Hero` · `hero`)

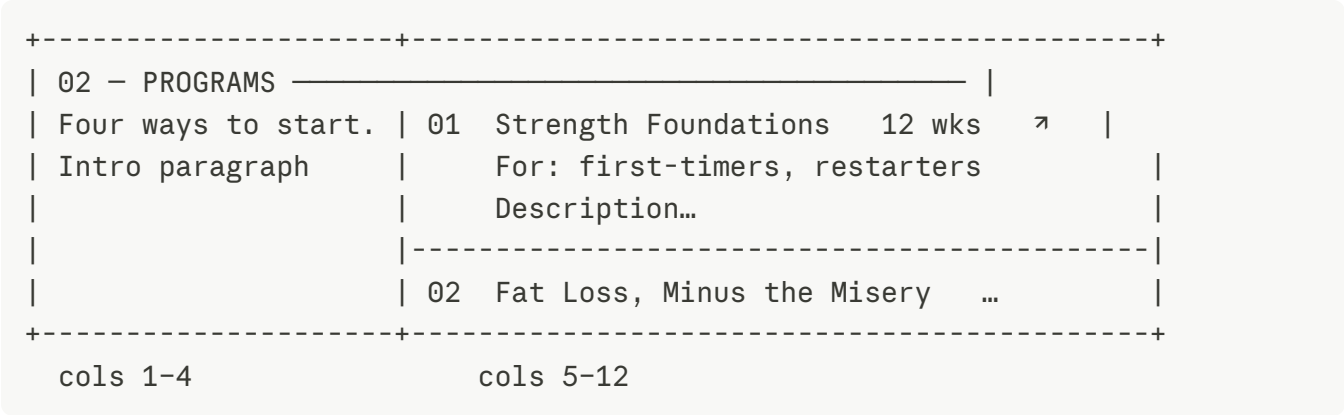

- **Signature move:** the digit "3" in the headline sits on an orange rectangle (`bg-accent`, ink text, `px-[0.12em]`), like a highlighter mark. No other word is highlighted
- **Desktop:** Text left (cols 1–7), vertically centered against a 4:5 photo (cols 8–12, about 440px wide). Label row above headline; headline max 4 lines; subtext `body-lg`; buttons in one row; microcopy `body-sm` in `muted`. The log tag sits at the photo's bottom-left, offset 16px
- **Mobile:** Label, headline, subtext, full-width primary button, text link, microcopy, then the photo (4:5, full width). The headline appears without scrolling on a 390×844 screen, and so does the primary button
- **Behavior:** Entrance animation per Doc 02 §8, once. The hero image uses `priority`. The secondary link scrolls to `#programs`
- **UX note:** The first fold must contain no navigation clutter beyond the navbar

3.3 Stats strip (`StatsStrip` · `stats`)

- **Desktop:** Ink band, four stats in a row separated by 1px vertical `rule` lines. Each: mono `numeral-xl` in `bone`, `label` in `muted` below

- **Mobile:** 2×2 grid with hairlines between cells
- **Behavior:** Static. No count-up animation. Numbers use tabular figures

3.4 Programs (`Programs` · `programs`)

- **Desktop:** Heading and intro in cols 1–4 (sticky at `top: 104px`); program rows in cols 5–12. Row grid: number (56px) · title + "for" label stacked · description · duration (mono, right) · arrow
- **Mobile:** Rows stack: number and duration on one line, title, "for" label, description. Whole row is a link with 24px vertical padding
- **Behavior:** Each row links to `#pricing`. Hover: row fills `ink`, text `bone`, arrow turns `accent` (150ms). Keyboard focus shows the same fill plus the focus outline. No images, no icons

3.5 About (`About` · `about`)

- **Desktop:** Photo (4:5) in cols 1–5; text in cols 7–12 with label, H2, two paragraphs, a "How I coach" numbered list (three items separated by hairlines, **not** three cards), and a mono credentials list. Below the two-column block, a **full-bleed photo band** (21:9) on desktop
- **Mobile:** Label, H2, photo (4:5), paragraphs, principles list, credentials. Photo band at 4:3
- **Behavior:** Static

3.6 Client results (`Results` · `results`)

```
+-------------------------------------------------------------+
| 04 — CLIENT RESULTS ──────────────────────────────────────── |
| Numbers, not before-and-after photos.   (heading + intro)   |
|-------------------------------------------------------------|
| Priya S., 38       | Goal: carry her   | Trap-bar deadlift  |
| Product manager    | toddler without   |   40 kg → 85 kg    |
| 16 WEEKS           | back strain       | Sessions / week 1 → 3 |
|-------------------------------------------------------------|
| (entry 2, different number of metric rows)                  |
+-------------------------------------------------------------+
  cols 1–4            cols 5–7           cols 8–12
```

- **Desktop:** Heading and intro on top, then three "log entries" stacked full width. Each entry is a 12-col row: person (cols 1–4), goal (5–7), metrics table (8–12) with a `label` header "START → NOW" and mono tabular numbers. The "now" number is `bone` on ink; `accent` is used only for the arrow glyph between values
- **Mobile:** Each entry stacks: person, duration tag, goal, then metrics as full-width rows
- **Behavior:** Static. A visible note: "Sample content for portfolio demonstration. Individual results vary."
- **Why not cards:** entries have different metric counts and different widths, so the layout reads as a log, not a card grid

3.7 Pricing (`Pricing` · `pricing`)

- **Desktop:** Label + H2 + intro on the left of a header row; on the right a short note on billing. Below: a 3-column grid with 24px gutters. Each tier is a square-cornered panel: tier name (`display-md`), mono tier number, price (`numeral-xl` , mono) with cadence in `label` , one-sentence summary, hairline, feature list with `Check` icons, full-width button. The **middle tier is inverted** (`ink` panel, `bone` text, orange "Most chosen" label in mono) and has 24px extra top padding so it sits slightly taller. No scale, no glow
- **Mobile:** Stacked, with the highlighted tier first via CSS `order` . Buttons full width
- **Behavior:** Every tier button scrolls to `#contact` . Button labels differ per tier ("Get the Blueprint", "Start coaching", "Apply for 1:1")
- **Below the grid:** one line in `body-sm` : cancellation and refund terms

3.8 Testimonials (`Testimonials` · `testimonials`)

- **Desktop:** Ink surface. One **featured quote** in cols 1–7 set in `display-md`; two shorter quotes stacked in cols 8–12 separated by a hairline. Each quote has a mono tag (`CHECK-IN · WEEK 6`), the quote, and an author line with a 40px square holding mono initials, name and descriptor
- **Mobile:** Stacked, featured first
- **Behavior:** Static. No carousel, no auto-rotate. The section carries the "Sample content" note in `body-sm`

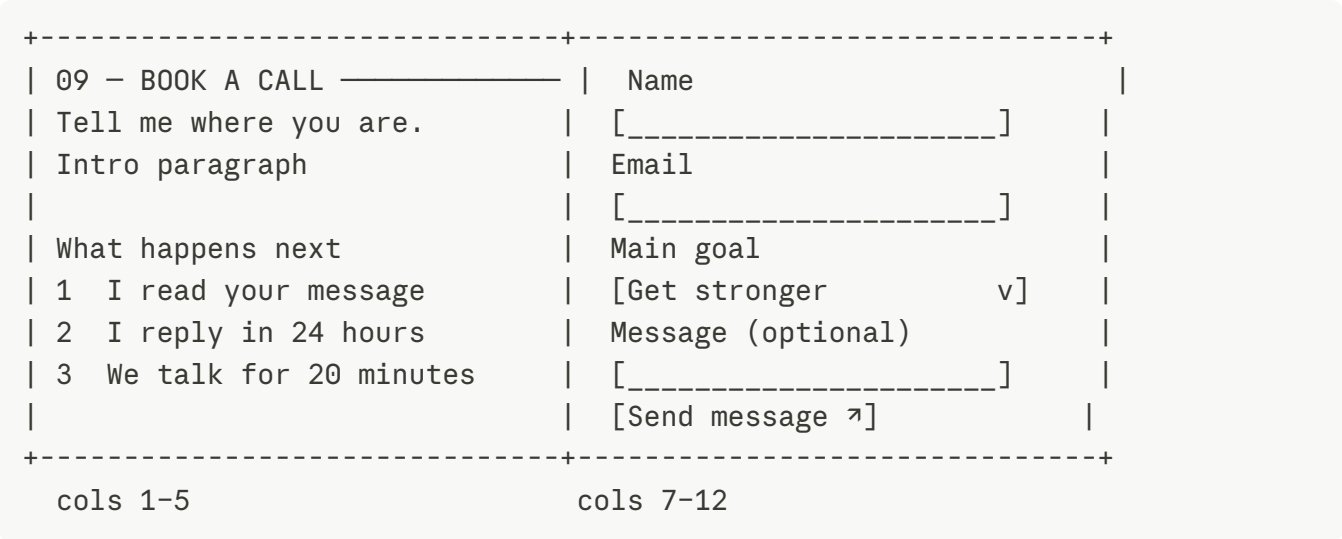

3.9 FAQ (`Faq` · `faq`)

- **Desktop:** Heading in cols 1–4 (sticky), six `<details>` items in cols 5–12, first item open by default
- **Mobile:** Heading, then items full width. Summary rows are at least 64px tall
- **Behavior:** Native disclosure widget; `Plus` icon rotates to 45° when open. Add `FAQPage` JSON-LD in the page `<head>` from the same config

3.10 Final CTA (`FinalCta` · `finalCta`)

- **Desktop:** 8px `accent` bar across the top edge, ink band below. H2 in `display-lg` (left, cols 1–8); a short paragraph and a primary button in cols 9–12
- **Mobile:** Stacked, button full width
- **Behavior:** Button scrolls to `#contact`. Left-aligned. This is the only section with the accent bar

3.11 Contact (`Contact` · `contact`, id `contact`)

- **Fields:** Name (required), Email (required, validated), Main goal (select: Get stronger / Lose fat / Move without pain / Not sure yet), Message (optional, max 600 characters). A hidden honeypot field named `botcheck` that real users never see
- **Validation:** On blur and on submit, using zod. Errors appear below the field with an `aria-describedby` link. On submit failure, an error summary appears above the button and focus moves to the first invalid field
- **States:** *Idle* → *Sending* (button disabled, label "Sending…", fields stay) → *Success* (form replaced by a confirmation block with `role="status"`: "Got it, {name}. I'll reply to {email} within 24 hours."; focus moves to it; a "Send another message" text link resets) or *Error* (inputs preserved, message "That didn't go through. Try again, or email {email} directly.")
- **Mobile:** Intro, "what happens next" steps, then the form. Fields are full width; the button is full width. Keep `autocomplete` attributes (`name`, `email`) and the right `inputmode`/`type`
- **Privacy note:** one line under the button

3.12 Footer (`Footer` · `footer`)

- **Desktop:** Ink. Four columns: wordmark + one-sentence blurb; Programs links (anchors); Page links (Coach, Results, Pricing, FAQ, Contact); Social (Instagram, YouTube, email). A bottom row: copyright left; "Sample content for portfolio demonstration" right
- **Mobile:** Columns stack; link rows are 44px tall

- **Behavior:** Static. All links point to real anchors or `mailto:`. Social links open in a new tab with `rel="noopener noreferrer"`. Because these are demo accounts, link to the platform home pages and note it in the README

4. Design-to-code map (this is the sync table)

Design frame	Component file	Config key	Surface	Client component?
Navbar / Mobile menu	`components/layout/Navbar.tsx`, `MobileMenu.tsx`	`nav`, `brand`	light	Menu only
Hero	`components/sections/Hero.tsx`	`hero`	light	No
Stats strip	`components/sections/StatsStrip.tsx`	`stats`	ink	No
Programs	`components/sections/Programs.tsx`	`programs`	light	No
About + photo band	`components/sections/About.tsx`	`about`	light	No
Client results	`components/sections/Results.tsx`	`results`	ink	No
Pricing	`components/sections/Pricing.tsx`	`pricing`	light	No
Testimonials	`components/sections/Testimonials.tsx`	`testimonials`	ink	No
FAQ	`components/sections/Faq.tsx`	`faq`	light	No
Final CTA	`components/sections/FinalCta.tsx`	`finalCta`	ink	No
Contact form	`components/sections/Contact.tsx`, `ContactForm.tsx`	`contact`	light	Form only
Footer	`components/layout/Footer.tsx`	`footer`, `brand`	ink	No
Buttons, labels, rows	`components/ui/*`	none (tokens)	n/a	No

5. Frames the design tool must deliver

1. Desktop full page, 1440px wide
2. Mobile full page, 390px wide
3. Mobile menu open
4. Contact form: error state and success state

5. A component sheet: all button variants (default/hover/focus/disabled), form field (default/focus/error), program row (default/hover), FAQ item (closed/open), pricing tier (normal/inverted)
6. A tokens frame listing the colors and type styles by the exact names in Doc 02

6. Design review checklist (run on the design file before any code)

- Any gradient, shadow, rounded corner, emoji, or icon tile? Remove it
- Any text on orange that is not ink? Fix it
- Any centered body text? Left-align it
- Does it use only the three fonts and the colors in Doc 02?
- Is there any copy that is not in Doc 04? Replace it with Doc 04's copy
- Is there any section that is not one of the twelve? Delete it
- Squint test: with the logo covered, is it recognizably this brand?
- Does the mobile frame show the headline and primary button above the fold?
